About

Senior software engineer with 10+ years in web development, specialising in front-end JavaScript and TypeScript. I've worked across media, travel, and agriculture, building performant, accessible products at companies including the Financial Times and Shopify. As comfortable diving into a Rails backend as I am architecting a React frontend, I bring both technical rigour and a product-focused mindset to everything I build.

Work Experience

- Jun. 2024 – Jul. 2025 **På(fyll) Remote** – Senior Software Engineer
- Implemented OAuth social sign-in with Vips, directly increasing account creation conversions.
 - Improved website performance, achieving a 4× improvement in blog post load times.
 - Acted as the most senior engineer in a fully distributed team, aligning people, priorities, and projects across time zones.
 - Translated business goals into practical technical solutions while keeping user needs central.
 - Raised overall engineering quality through mentorship, code review, and a focus on clean, maintainable code.
 - Designed and built scalable, reliable systems architected to grow with the product and business.
- Jul. 2022 – May 2023 **Shopify Remote** – Senior Software Engineer
- Increased parsed orders surfaced in the Shop App by 1.5x writing performant, bespoke Python parsers for email templates at scale.
 - Leveraged LLMs to create an automated email parsing system hit 40m times per day.
 - Worked on the parcel tracking section of the Shop App, a React Native app using Typescript and GraphQL, implementing features throughout the stack including the Ruby on Rails backend.
- Apr. 2021 – May 2022 **Yara International Berlin, Germany** – Senior Software Engineer
- Managed responses to customer facing incidents, reducing visible impact to customers as quickly as possible, and coordinating responses from engineers and communicating with Customer Service team and Product stakeholders on updates.
 - Advocated for, and introduced tickets on our roadmap for improved Observability and Monitoring of frontend architecture and product stability, to speed up diagnosis of complex bugs and improve our response time to live incidents.
- Oct. 2019 – Mar. 2020 **Get Your Guide Berlin, Germany** – Senior Software Engineer
- Worked on Get Your Guide's user facing website aimed at the post purchase user journey. Helped to encourage a culture of front-end development with an accessible and performant web in mind.
- Nov. 2015 – Aug. 2019 **Financial Times London, United Kingdom** – Senior Software Engineer
- Helped rebuild FT.com, which launched late 2016 becoming one of the fastest newspaper websites in the industry.

- Was the technical lead in a cross-functional team heading up two B2B products responsible for £40m annual revenue to the Financial Times. This primarily involved code reviews, handling and delivering stakeholders' visions of the products, and steering the technical architecture of them.

Skills

Experienced	JavaScript, TypeScript, HTML, CSS, React, Node.js, Git
Intermediate	Ruby on Rails, Python, Bash
